M8	18	8.2	1.4	2.35

Description	A circular washer with a trapezoidal cross section. The top side of the washer has serrations stamped into the surface that extend outward from the washer's inner edge.
Applications/ Advantages	The washer is designed to sustain preload and avoid becoming loose. As the screw or bolt is fastened, the serrated surface engages with the mating face and keeps the fastening from loosening due to vibration.
Material	A2 Stainless Steel
Plating	Stainless conical spring washers are usually supplied without any additional finish.
